

Wildland Fire Safety Presentation

SPEAKERS:

COO Michael Brandt, Facilitator, Deputy Director for Operations

Todd LaBerge, P.E. Fire Marshal

Nick Bartlett, P.E. Senior Fire Protection Engineer

August 14, 12:00 - 1:00 pm

Building 50 Auditorium

The wildland fire season in California continues to lengthen and is now nearly a year-round occurrence. At the same time, wildland fires have become larger, more frequent, and more devastating. It has become essential for us as individuals and as a Lab community to better understand the wildland fire issues and risks, and to recognize what we can do as community members to be more prepared.

This presentation casts the wildland fire risks and mitigation efforts into a broader context, highlighting why wildland fires and their impacts continue to grow year-over-year. Practical tips will be provided on how to make your home more wildland fire resistant, as well as preparations you and your family can make for a wildland fire emergency. We will also discuss the continual measures LBNL undertakes to make the campus more fire safe and responsive to a wildland fire event.

Join us on August 14th at noon in the Building 50 auditorium.

This presentation will be live-streamed and recorded.
